PROFILE

Final-year Computer Science student at Poznań University of Technology specialising in Artificial Intelligence. Hands-on experience building machine learning models in Python with PyTorch, TensorFlow, and scikit-learn, with a growing focus on NLP and large language models.

EDUCATION

Poznań University of Technology Oct 2021 – Sep 2026 (expected)
M.Sc. & B.Sc., Computer Science — specialisation: Artificial Intelligence Poznań, Poland

- **Master's thesis (in progress):** *Robust value-based method for group decision support.*
- **Relevant coursework:** Machine Learning, Deep Learning, Natural Language Processing, Probability & Statistics, Linear Algebra, Optimization, Algorithms & Data Structures, Databases.

EXPERIENCE

bit4mation Polska Sp. z o.o. Aug 2024
Software Engineering Intern Poznań, Poland

Echo Edukacji Sp. z o.o. Oct 2024 – Jun 2025
Math and Physics Tutor Poznań, Poland

Private Tutoring (Self-Employed) Jun 2025 – Present
Math and Physics Tutor Poznań, Poland

- Teach mathematics and physics at secondary level, including final-exam preparation.
- Built and operate the scheduling and billing platform used to run the practice (see *Projects*)

TECHNICAL SKILLS

Programming	Python (advanced), SQL
ML & Deep Learning	PyTorch, TensorFlow, scikit-learn, Hugging Face Transformers
Data & Visualisation	pandas, NumPy, matplotlib, seaborn
Backend & Web	FastAPI, SQLAlchemy, Alembic, REST APIs, React
MLOps & Tools	Git, Docker, MLflow, pytest, Linux, $\LaTeX$
Databases	PostgreSQL, MongoDB, SQLite
Cloud	AWS (basic)
Focus areas	Classical ML, NLP, Large Language Models, Reinforcement Learning

PROJECTS

Tutoring Management Platform — production system — Python, FastAPI, SQLAlchemy, React, Docker, Caddy
Full-stack application for lesson scheduling, billing, and student accounts, in daily production use. JWT auth with role-based access control, account lockout, per-IP rate limiting. Deployed via Docker Compose behind Caddy on a Linux VPS, with Alembic migrations, continuous database replication to object storage (Litestream), and a regression test suite.

6 nimmt! — Reinforcement Learning Card-Game Agent — Python, PyTorch
Built an AI agent that learns to play the card game *6 nimmt!* using Deep Q-Networks (DQN). Designed the game environment, state representation, and reward shaping; trained and evaluated multiple bot variants in self-play. University project.

Machine Learning Mini-Projects — Python, scikit-learn, pandas, PyTorch
Collection of smaller end-to-end ML projects covering classification, regression, and exploratory data analysis on tabular and text data — including data cleaning, feature engineering, model selection, and evaluation with cross-validation.

LANGUAGES

Polish	Native
English	B2 / C1 (upper-intermediate to advanced)

INTERESTS

ML enthusiast • Mathematics • Physics • Video games • Board games
